

# The Burnout Ledger — Energy vs. Income Audit

*The book stays full, the hands stay steady, and something underneath runs on fumes. Today you audit that part.*

## 1 · LEDGER

| REGULAR SERVICE / CLIENT | INCOME | ENERGY (1-10) | KEEP · REPRICE · RELEASE |
|--------------------------|--------|---------------|--------------------------|
|                          |        |               |                          |
|                          |        |               |                          |
|                          |        |               |                          |
|                          |        |               |                          |

## 2 · PROTECT ONE THING

The single boundary that would return the most energy (a day, an hour, a service, a client type) — and the sentence that enforces it:

---

---

---

## 3 · TONIGHT

- ☐ Put the recovery block on next week's calendar before any booking can take it.
- ☐ Draft the reprice/release message for the worst ledger row.
- ☐ Tell one person your new boundary — witnesses make it real.
